HELOC Loan Workflow — Overview

How standardized tasks and automated rules in Encompass work together to produce a consistent, documented, compliant HELOC loan file.

85	290	189	521	14
Tasks	Checklist subtasks	Automated rules	Rule actions	Deadline timers

How it works

Tasks are standardized work items (e.g. *Review Credit*, *Send Disclosures*, *Underwrite*, *Fund Loan*), each with a defined checklist of subtasks, an assigned role and a due date. **Rules** watch the loan file and act on it automatically. Because one rule's action is often the next rule's trigger, the rules chain into an end-to-end process that does not depend on staff remembering the next step.

1. Something happens	2. Rule checks conditions	3. Rule takes action
A loan field changes, a document is attached, a milestone or task is completed, a timer expires	Loan program, lien position, dates, prior decisions — only applicable loans are affected	Create or complete tasks, send notices and disclosures, assign roles, update fields, start or stop timers

What the rules do

Across the 189 automated rules, Encompass carries out 521 actions without manual intervention:

Action	Count	Action	Count
Create a task	93	Update condition tracking	24
Complete a task	68	Add an underwriting condition	23
Add a checklist subtask	62	Start a deadline timer	19
Complete a checklist subtask	53	Stop a deadline timer	12
Send an internal notification	49	Place a vendor order	10
Assign work to a role	41	Move the loan folder	7
Request a document	29	Send a disclosure package	4
Update a loan field	27		

Why this supports a compliant file

- **Consistency** — every HELOC receives the same tasks and checklist; required steps are created automatically.
- **Event-driven notices** — disclosures and adverse-action letters are tied to the events that require them (application, denial, counteroffer, withdrawal, incomplete application).
- **Enforced deadlines** — timers issue warnings and close items (Notice of Incomplete, counteroffer, approval expiration, closing, funding).
- **Segregation of duties** — work is assigned by role (processor, underwriter, closer, funder, QC); denials require a two-step review.
- **Quality control** — pre-closing QC (credit refresh, fraud report) and post-closing QC (document receipt, note/mortgage delivery, recording, HMDA, storage) are built into the same workflow.
- **Audit trail** — Encompass records who completed each task and subtask and when, giving a complete, time-stamped history of the file.

Example scenarios handled end to end

- A loan is denied
- A counteroffer is made
- A counteroffer is accepted, declined or runs out
- An appraisal is ordered and received
- An appraisal is cancelled and refunded
- Flood certificate ordered and reviewed
- Funding and wire
- A loan is withdrawn
- Notice of Incomplete
- Closing documents received and cold storage
